Contents

1 Problems **1**

1.1 Junior Problems 3
1.2 Senior Problems 18
1.3 Undergraduate Problems 34
1.4 Olympiad Problems 50

2 Solutions **67**

2.1 Junior Solutions 69
2.2 Senior Solutions 117
2.3 Undergraduate Solutions 188
2.4 Olympiad Solutions 269

3 Articles **343**

3.1 Discover Disc Covers! 345
3.2 Equiangular Polygons – An Algebraic Approach 352
3.3 On Some Elementary Inequalities 361
3.3.1 Two proofs of the lemma 361
3.3.2 Three related problems 363
3.3.3 Solution to the USAMO problem 366
3.3.4 An interesting consequence 367
3.4 From Baltic Way to Feuerbach – A Geometric Journey 369
3.4.1 Introduction 369
3.4.2 A problem from the Baltic Way 1995 370
3.4.3 The incenter 375

3.4.4 Nine-point circle and incircle . . . 377
3.4.5 The Feuerbach point as an Anti–Steiner point . . . 383
3.5 Multivariate Generating Functions and other Tidbits . . . 395
3.5.1 Introduction . . . 395
3.5.2 What is a Generating Function? . . . 395
3.5.3 An Essential Tool . . . 397
3.5.4 Multiple Variables . . . 399
3.5.5 More Rigorous Treatment . . . 404
3.5.6 Finitization . . . 407
3.6 Nice Numbers . . . 410
3.7 A Sharp Bound on the Two-Variable Power Mean . . . 414
3.8 The Arithmetic Compensation Method . . . 421
3.8.1 Theory . . . 421
3.8.2 Applications . . . 423
3.9 On a Class of Sums Involving the Floor Function . . . 428
3.10 A Method of Solving Inequalities . . . 433
3.11 A Note on the Malfatti Problem . . . 436
3.11.1 Introduction . . . 436
3.11.2 A dual Malfatti problem . . . 437
3.11.3 The Malfatti problem for an equilateral triangle . . . 439
3.11.4 An open Malfatti type problem . . . 441
3.12 Proving Inequalities Using Linear Functions . . . 443
3.13 On a Class of Elementary Symmetric Functions . . . 447
3.13.1 Introduction . . . 447
3.13.2 The Result . . . 447
3.14 A Note on the Breaking Point of a Simple Inequality . . . 451
3.15 The Stronger Mixing of Variables Method . . . 455
3.15.1 The SMV Theorem . . . 455
3.15.2 SMV theorem and some applications . . . 456
3.15.3 Practice problems . . . 461
3.16 A Minimum Problem . . . 462
3.16.1 Introduction . . . 462
3.16.2 The minimum of $R_1R_2 + R_2R_3 + R_3R_1$ . . . 462
3.17 Inequalities on the Sum of the Medians and Symmedians . . . 465

3.18 Four Applications of RCF and LCF Theorems 467
3.18.1 Introduction 467
3.18.2 Proofs of the proposed inequalities 469
3.19 A Nice Inequality 475
3.20 On a Class of Three-Variable Inequalities 480
3.20.1 Theorem 480
3.20.2 Applications 482
3.21 Vector Properties of Equilateral Triangles 491
3.22 A Note on the Carmichael Function 495
3.22.1 Introduction 495
3.22.2 The Carmichael Function 496
3.23 On the Area of a Pedal Triangle 500
3.24 The Neuberg-Mineur Circle 511
3.24.1 Introduction and geometrical prerequisites 511
3.24.2 The main results 517
3.24.3 A lemma on directly similar triangles 520
3.24.4 Proof of Theorem 3 521
3.24.5 Two proofs of Theorem 4 529
3.25 A Nice and Tricky Lemma (Lifting the Exponent) 535
3.26 A New Proof of Napoleon's Theorem 541
3.27 Harmonic Division and its Applications 544
3.28 On the AM-GM Inequality 557
3.29 Expected Value of the Length of a Random Divisor 561
3.29.1 Introduction and Preliminaries 561
3.29.2 A General Recursive Algorithm for finding $E(n)$ 562
3.29.3 An Explicit Formula for $E\left(p^{\alpha}\right)$ 565
3.29.4 Conclusion 570
3.30 The Method of Viète Jumping 571
3.31 The SOS-Schur Method 576
3.32 Trigonometric Substitutions with Broad Results 580
3.32.1 Substitutions and Transformations 582
3.32.2 Well-known inequalities 585
3.32.3 Well-known identities 585
3.32.4 Applications 586

3.32.5 Problems for independent study 592
3.33 A Factoring Lemma 595
3.33.1 Introduction 595
3.33.2 Diophantine Equations 596
3.33.3 Sums of two squares and $\mathbb{Z}[i]$ 599
3.33.4 Exercises 602
3.34 An Extension of Carnot's Theorem 603
3.34.1 Introduction 603
3.34.2 Proofs 604
3.34.3 Some applications 607
